AirUCI Institute
...smart energy, sustainable environment

AirUCI provides outstanding opportunities for undergraduates, graduate students, postdoctoral researchers, and UCI faculty to contribute to our research projects... and they do! This is particularly beneficial for students who wish to further their studies in the areas of smart energy, health, and a sustainable environment.

Educational Opportunities

All members of our AirUCI team contribute to the many published papers we submit to peer-reviewed journals, including widely-read interdisciplinary journals such as *Science* and *Nature*. In addition to the vital laboratory work they perform, our team members from undergrads on up regularly give presentations at scientific meetings held by groups such as the American Chemical Society, the American Geophysical Union, the American Vacuum Society, and many others.

AirUCI is an Organized Research Unit (ORU) located at the University of California, Irvine. We are a multidisciplinary environmental research group dedicated to the study of and solutions for critical issues relating to climate change, air pollution, energy, and green technology — from local to global scales.

To achieve these ambitious goals, our world-renowned team has come together to form an integrated group of researchers, health scientists, and engineers whose focus is to elucidate the fundamental science and impacts of pollution, energy, and climate change and their effects on human health, society, and our planet.

Our award-winning team members conduct collaborative, fundamental research into the critical environmental issues of our time and their associated health effects, utilizing cutting-edge technology and state-of-the-art scientific and engineering approaches.

AirUCI researchers work to understand the interactions between man-made emissions (like exhaust gases) and natural ones (such as sea salt) which combine in the atmosphere to create unknown reactions.

Want to help? You can assist with an endowment, with funding for state-of-the-art instrumentation, and with other support that will directly augment our work to solve the environmental and health crises we face.
Why our work matters...

It is increasingly clear that the environmental impacts of human pollutants are among the most pressing problems for this and future generations. Understanding the sources and effects of these pollutants is crucial if we are to avoid the most extreme impacts and find cost-effective solutions to these urgent crises.

We’re dedicated to understanding and solving air pollution, climate impact, and energy issues locally and globally and to mitigating the effects of pollution on human health. To achieve these ambitious goals, UCI chemist and Distinguished Professor Barbara Finlayson-Pitts founded AirUCI in 2005 with eight faculty. Now there are 26 UCI professors who have joined forces to establish an integrated group of researchers, engineers, economists, biologists, and medical researchers.

AirUCI also works closely with leading U.S. and international scientists, thus enhancing the impact of our research findings and greatly multiplying their benefits for the public. AirUCI's work promises to enable the creation of innovative technologies to minimize the effects of pollution and to uncover new approaches to solving these vital issues.

Impact

The research breakthroughs achieved by AirUCI scientists are used to model test scenarios for:
- air pollutant controls that would ease effects on health and the environment
- advances in clean energy sources
- pesticide policies that help ensure food security and agricultural sustainability
- climate change mitigations and solutions

AirUCI’s work promises to enable the creation of innovative technologies to minimize the effects of pollution and to uncover new approaches to solving these vital issues.

Research

Our research areas include:
- health effects of air pollution
- earth systems affected by emissions into the atmosphere
- atmospheric processes converting emissions into harmful air pollutants
- sustainable fuel and energy issues
- role of clouds in atmospheric chemistry
- ice core sampling for the history of atmospheric composition
- and many other areas of scientific interest.

Our Faculty Team

Our team has an established history of effective scientific collaboration. Professors from four UCI schools comprise our institute.

School of Physical Sciences
Donald R. Blake    Annmarie G. Carlton
Claudia Cziryczik    Steven J. Davis
Michael B. Dennin    Barbara J. Finlayson-Pitts
Filipp U. Furche    R. Benny Gerber
Alex B. Guenther    John C. Hemminger
Saewung Kim    Craig Murray
Sergey Nizkorodov    Michael J. Prather
Eric S. Saltzman    Manabu Shiraiwa
James N. Smith    Douglas C. Tobias

School of Medicine
Ralph Delfino    Rufus Edwards
Michael T. Kleinman    Jun Wu

Henry Samueli School of Engineering
Jacob Brouwer    Donald Dabdbuck
G. Scott Samuelsen

School of Biological Sciences
Celia Faiola

Each of these has his/her own research group in addition to being part of AirUCI, with numerous postdoctoral scholars, grad students, and often with staff researchers.

AirUCI represents partnerships between faculty at UCI and international researchers from, for example, the Weizmann Institute of Science in Israel; Fudan University in China; Wilfrid Laurier University in Canada; the Helmholtz–Zentrum/BESSY Institute in Germany among many others. We also collaborate with universities and agencies across the U.S. as well as researchers from Pacific Northwest National Laboratory and Lawrence Berkeley National Laboratory.
