We highlight our outstanding students in each issue.

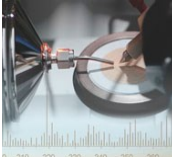

Making a Difference

Manabu Shiraiwa collaborates extensively with other AirUCI researchers and far beyond our campus, as do most of our faculty. His work on indoor air pollution with the MOCCIE project includes an international team of experts in this field (including our Doug Tobias), all striving to construct an integrated model for evaluating the processes of indoor air chemistry.

Latest Research

Claudia Czimczik's new studies document the reduction in carbon dioxide emissions during the height of the COVID-19 pandemic and employed innovative methods to do so, which included driving around Los Angeles area freeways and collecting wild grass samples for radiocarbon dating analysis with help from a team of statewide volunteer scientists.

Spotlight on Faculty

Jim Randerson and his research team tramp through California's forests, collecting data as they go—data which is used to analyze and monitor many aspects of woodlands management such as the effects of drought, logging, fires, and disease on the health of our forested lands... and also whether state carbon offset programs are working as planned.
